EXPERIMENT 6: Automating Business Processes Using Deluge Scripting and Workflows, with Application Testing and Debugging

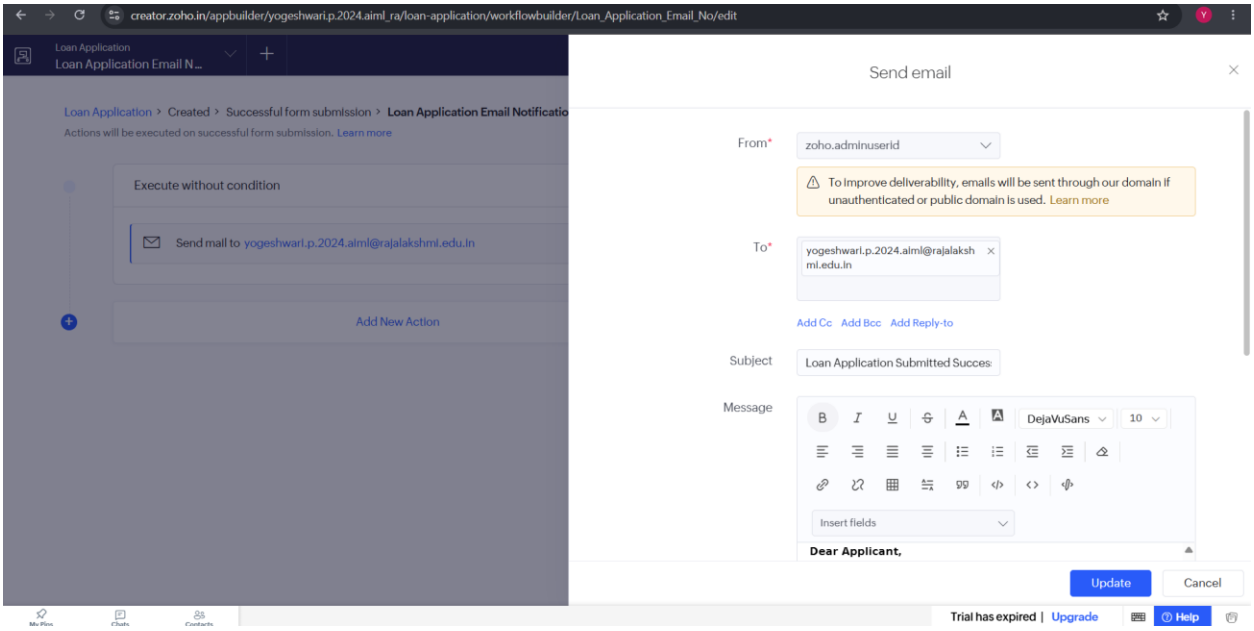

Aim

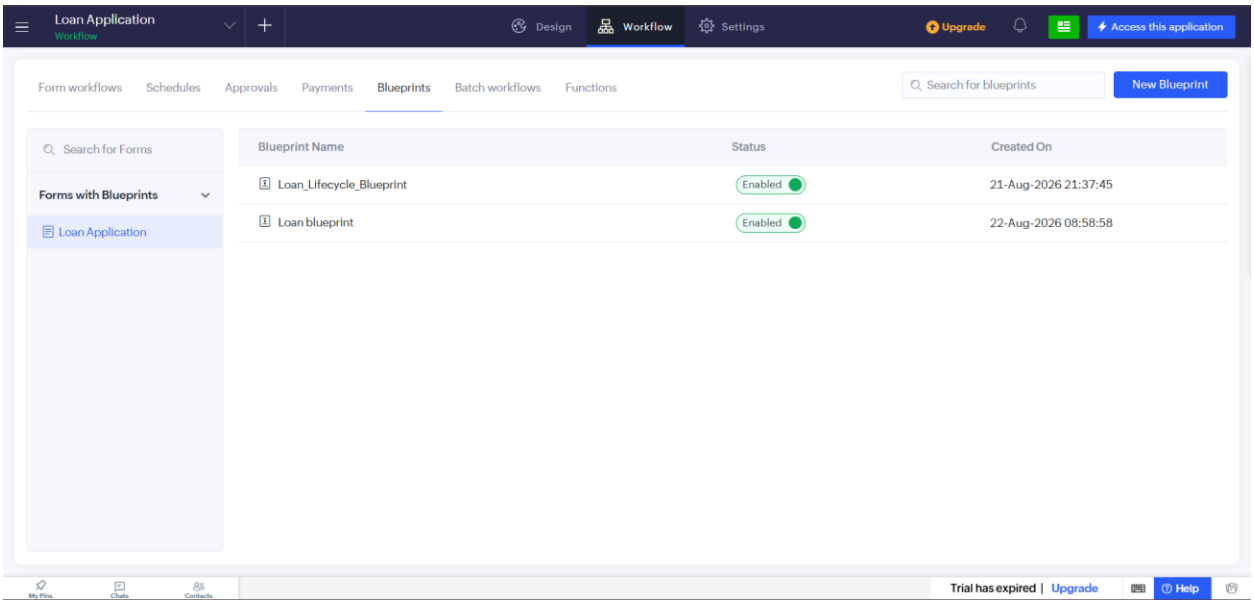

To automate loan application processes using Deluge scripting and workflows in Zoho Creator, and to test and debug the application to ensure accurate and efficient functioning.

Observation

Deluge scripting and workflows enable the automation of loan application activities such as data validation, loan status updates, document verification, and approval processing. Testing helps identify errors in form submissions, workflow execution, and data handling, while debugging helps improve application reliability.

Result

Thus, the automation of loan application processes using Deluge scripting and workflows was studied, and the application testing and debugging procedures were documented for the Loan Application Management System.
