

EXPERIMENT 1: Comparative Study of Low-Code Development using Loan Application Form

Aim

To study the advantages of developing a Loan Application Form using Zoho Creator, a low-code platform, and compare it with traditional programming methods.

Comparison Table

Traditional Development	Low-Code(Zoho Creator)
Write HTML, CSS, JavaScript for the form interface	Drag-and-drop form builder
Write backend code manually	Automatic database creation
Manual validation for fields	Built-in validation rules
Manual report and dashboard creation	Auto-generated reports
More coding knowledge required	Minimal coding required
Longer development time	Faster development
Separate integration for database and UI	Unified platform with form, database, and reports

SCREENSHOTS:

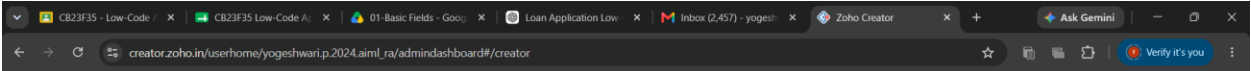

Create from scratch

A thin horizontal line separating the 'Create New Application' section from the rest of the page.

Observation

Developing the Loan Application Form using Zoho Creator is faster, easier, and requires minimal coding effort. The platform automatically handles database creation, field validation, report generation, and workflow management, making it highly suitable for banking and financial service applications.

Result

The Comparative Study of Low-Code Development using the Loan Application Form was completed successfully. The study demonstrated that Zoho Creator reduces development time, minimizes coding complexity, provides built-in validations, and simplifies report generation when compared with traditional programming approaches.
