EXPERIMENT 11: Deploying a Zoho Creator Application from Development to Production Environment

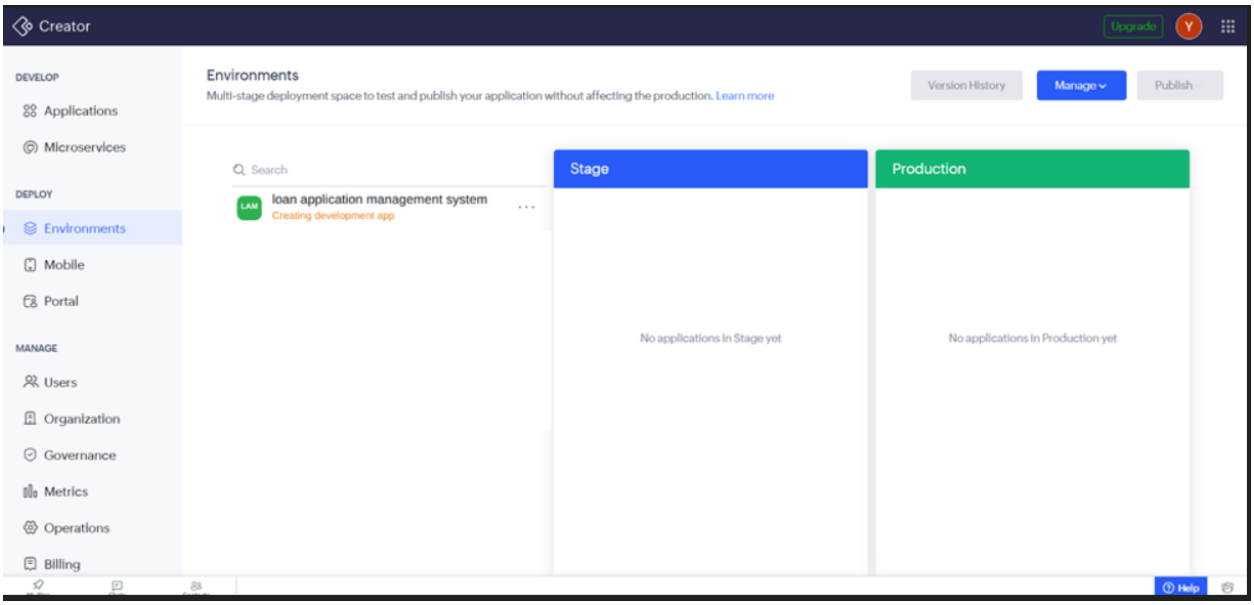

Aim

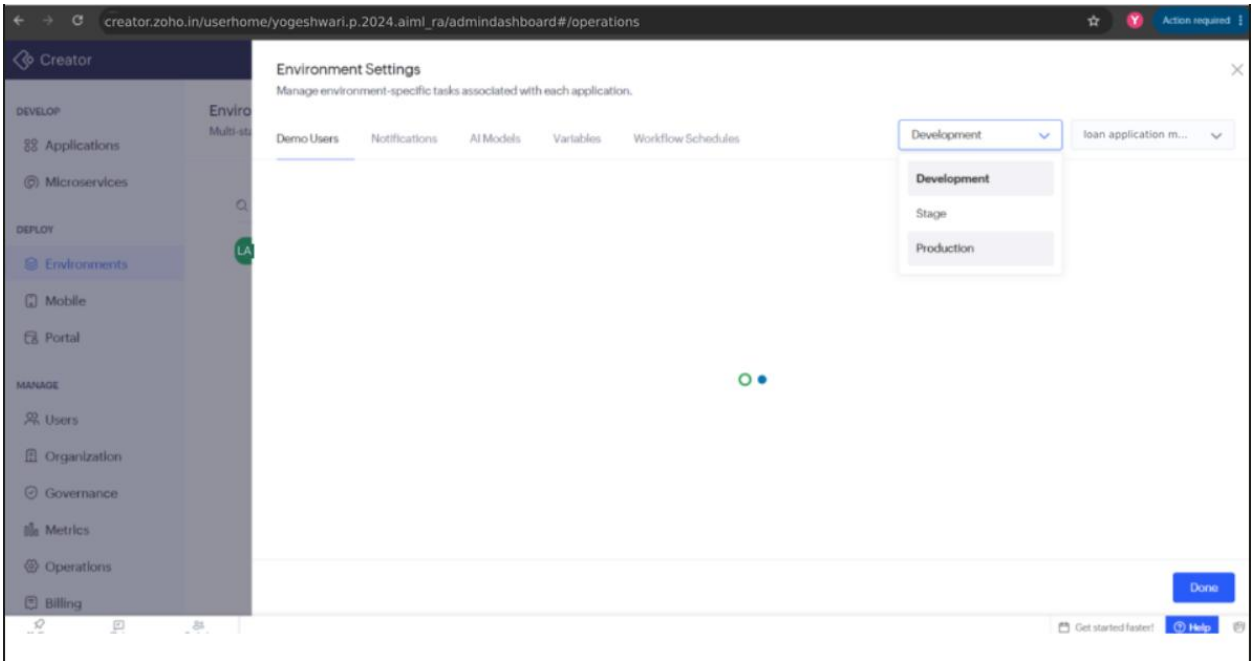

To study the process of deploying the Loan Application Management System from the development environment to the production environment using Zoho Creator.

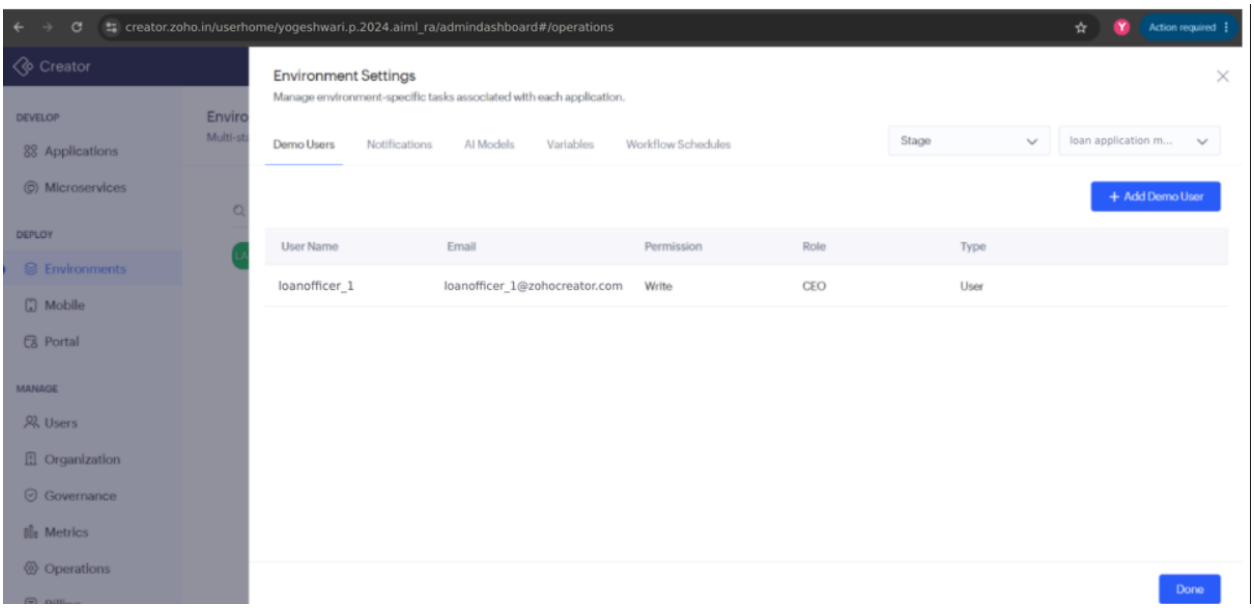

Procedure

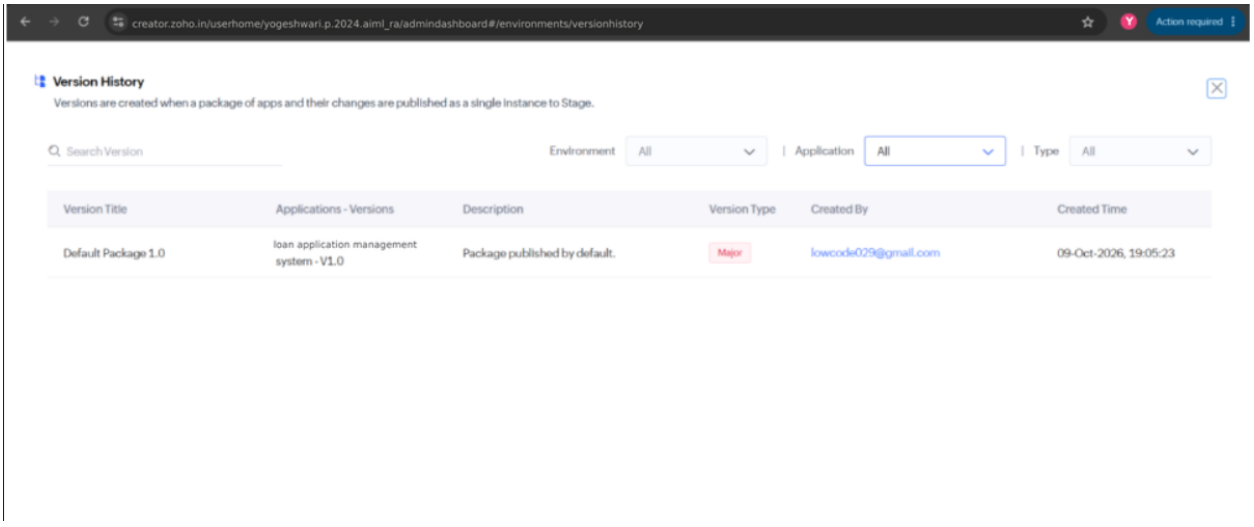

1. Log in to Zoho Creator using the registered account credentials.
2. Open the Loan Application Management System from the application dashboard.
3. Navigate to the application's development environment.
4. Review the existing Loan Application form, reports, workflows, and other application components.
5. Verify that all required fields and configurations are properly saved.
6. Test the application by entering sample loan application details.
7. Check whether form submissions, report displays, and configured workflows function correctly.
8. Open the application's environment management or deployment settings.
9. Review the available options for deploying the application from Development to Production.
10. Select the appropriate deployment option and review the changes included in the deployment.
11. Validate the application components and resolve any errors identified during the deployment checks.
12. If production deployment is available, proceed with the deployment and confirm the operation.
13. Open the production environment and verify that the deployed forms, reports, and workflows function correctly.
14. Document the deployment process and its outcome.

Observation

Zoho Creator provides environment management features to develop, test, and deploy applications. The Loan Application Management System can be reviewed in the development environment before deployment. Forms, reports, workflows, and other application components can be validated to ensure proper functionality before releasing the application to the production environment.

Result

Thus, the deployment process of the Loan Application Management System from the development environment to the production environment was studied using Zoho Creator.
